

# Environmental policy

---

Caldaro is the link between man and machine; our mission is to optimise that interface. For us, there is nothing as important as human interaction, which is why we must satisfy the highest quality and sustainability standards to always be the strongest link.

Our ambition is to contribute to long-term and sustainable development, where we can help to counteract global warming by reducing the impact on the climate. Caldaro will actively participate in developing new technologies for climate adaptation, and be part of the "UN Global Compact" to contribute to sustainability and the reduction of energy resources.

To achieve this, it is essential that all staff, as well as our partners, strive for continuous improvement to minimise emissions and pollution.

We do this by ensuring that:

- Each employee takes personal responsibility for planning travel and transportation with environmental considerations in mind
- We always put energy consumption and the environment at the heart of everything from product choice to freight alternatives
- We monitor legislation and other requirements, ensuring compliance which contributes to our development.
